PROFESSIONAL SUMMARY

Aspiring technology professional with strong proficiency in Python and Java, and a solid foundation in Data Structures, Algorithms, Software Development, and Problem Solving. Skilled in designing and developing efficient applications, analyzing data, and implementing innovative solutions using modern technologies and frameworks. Familiar with machine learning concepts, software engineering principles, and system design through academic projects and hands-on experience. Passionate about building reliable, scalable, and impactful solutions while continuously learning and adapting to emerging technologies.

TECHNICAL SKILLS

Languages: Python, Java

Frontend: HTML, CSS, React

Backend: Flask, RESTAPI, Node.js

Databases: MongoDB, MySQL

Machine Learning: TensorFlow, OpenCV, CNN Architecture

DevOps & Deployment: Github, Vercel, Postman

Development Tools: VS Code, Google Colab, Cursor

INTERNSHIP

Web Developer Intern (React)
Sangam Soft Tech Solution

Aug 2024 - Sep 2024

- Developed and deployed a full-stack MERN blog platform with JWT-based authentication and role-based access control.
- Designed RESTful APIs and optimized MongoDB queries to improve database response performance.
- Implemented dynamic frontend components using React and integrated backend services using Node.js and Express.
- Managed version control using Git and deployed the application on Vercel.

PROJECTS

DeepFake Detection Application

- Built a CNN-based real-time video forgery detection system using CELEB-DF and FaceForensics++ datasets.
- Trained the models for 10+ hours, achieving 85% validation accuracy.
- Implemented frame extraction and preprocessing using OpenCV to enhance inference performance.
- Tools:** Python, TensorFlow, OpenCV

Modular AI Assistant

- Architected a purpose-specific LLM-based assistant platform enabling users to configure multiple domain-restricted AI agents.
- Implemented domain-restricted response logic to reduce irrelevant outputs and improve contextual accuracy.
- Designed modular backend architecture with persistent storage using MongoDB.
- Tools:** Python, React, MongoDB

Multi-Model Forgery Detection

- Developed a unified system combining deepfake detection, lip-sync analysis, metadata inspection, and semantic verification.
- Generated a multi-factor forgery confidence score with consolidated reporting.
- Tools:** Python

Student Consultation App

- Built a MERN-based real-time consultation platform using Socket.IO.
- With Low communication latency and handled concurrent users using optimized MongoDB schema design.
- Implemented authentication and secure session management.
- Tools:** JavaScript, React, Node.js, MongoDB

EDUCATION

B.Tech in Artificial Intelligence and Data Science
KGISL Institute of Technology CGPA: 7.97 / 10

Nov 2022 – May 2026

ACHIEVEMENTS

- Runner-Up – AITM Codefest 2024 (Modular AI Assistant Platform UI)
- Runner-Up – Amazon AWS DeepRacer Competition (2023)
