PROFESSIONAL SUMMARY

Aspiring AI/ML Engineer with proficiency in Python and Java, and a strong foundation in Data Structures, Algorithms, Software Development, and Problem Solving. Experienced in developing machine learning solutions, data preprocessing, model training, and AI-powered applications. Skilled in Deep Learning, Natural Language Processing (NLP), Computer Vision, and API integration through hands-on projects. Passionate about Generative AI, Large Language Models (LLMs), AI deployment, and building scalable, production-ready AI solutions.

TECHNICAL SKILLS

Programming Languages: Python, Java

AI & Machine Learning: Model Training, Model Evaluation, CNNs, TensorFlow, Scikit-learn, OpenCV, NumPy, Pandas, Data Preprocessing

Web Technologies: React, HTML, CSS

Databases: MongoDB, MySQL

Tools & Platforms: Git, GitHub, Google Colab, VS Code, Cursor, Postman, Vercel

Soft Skills: Problem Solving, Critical Thinking, Quick Learning, Analytical Thinking, Communication, Time Management

INTERNSHIP

Web Developer Intern (React)

Aug 2024 - Sep 2024

Sangam Soft Tech Solution

- Developed and deployed a full-stack MERN blog platform with JWT-based authentication and role-based access control.
- Designed RESTful APIs and optimized MongoDB queries to improve database response performance.
- Implemented dynamic frontend components using React and integrated backend services using Node.js and Express.
- Managed version control using Git and deployed the application on Vercel.

PROJECTS

DeepFake Detection Application - AI/ML

- Built a CNN-based real-time video forgery detection system using CELEB-DF and FaceForensics++ datasets.
- Trained the models for 10+ hours, achieving 85% validation accuracy.
- Implemented frame extraction and preprocessing using OpenCV to enhance inference performance.
- Tools:** Python, TensorFlow, OpenCV

Modular AI Assistant - AI/ML

- Architected a purpose-specific LLM-based assistant platform enabling users to configure multiple domain-restricted AI agents.
- Implemented domain-restricted response logic to reduce irrelevant outputs and improve contextual accuracy.
- Designed modular backend architecture with persistent storage using MongoDB.
- Tools:** Python, React, MongoDB

Multi-Model Forgery Detection - AI/ML

- Developed a unified system combining deepfake detection, lip-sync analysis, metadata inspection, and semantic verification.
- Generated a multi-factor forgery confidence score with consolidated reporting.
- Tools:** Python

Student Consultation App - MERN Stack

- Built a MERN-based real-time consultation platform using Socket.IO.
- With Low communication latency and handled concurrent users using optimized MongoDB schema design.
- Implemented authentication and secure session management.
- Tools:** JavaScript, React, Node.js, MongoDB

EDUCATION

B.Tech in Artificial Intelligence and Data Science

Nov 2022 – May 2026

KGISL Institute of Technology CGPA: 7.97 / 10

ACHIEVEMENTS

- Runner-Up – AITM Codefest 2024 (Modular AI Assistant Platform UI)
- Runner-Up – Amazon AWS DeepRacer Competition (2023)
